Physicall Elections.

Take { Vomits, Glisters, Gargarismes, Preparatives, Stop Rheumes and Fluxes, Purge by neesling } { The Moon or Signe in } ♈ ♉ ♊ ♋ ♌ ♍ ♎ ♏ ♐ ♑ ♒ ♓

Fit times for blood-letting.

The Sanguine from the new moon to the first quarter.
The Cholericke, from the first quarter to the full.
The Flegmaticke, from the full to the last quarter.
The Melancholy, from the last quarter to the change.

Dangerous times for blood-letting.

In the heate of summer, or cold of winter, or when the moon is in the signe which governeth that part of the body you would let blood; Also within two dayes of the change, or full of the moone.

The Anatomie of mans Body as the parts thereof are governed by the twelve Celestiall Signes of the Zodiack.

Aries, Head and face.

Taurus, Neck and throat.

Cancer, Brest and stomach

Virgo, Bowels and belly

Scorpio, Secret members

Capricorn, Knees.

Gemini, Armes and hands

Leo, Heart and back

Libra, Reynes and loynes

Sagittarius, Thighes

Aquarius, Legges

Pisces, the Feet.

Of the Tide Table, or high Water at London-Bridge, *Whitby, Harle-poole, and Penmark.*

IN the two last columnes of the Almanack toward the right hand is set downe the time of high water at Lōdō bridge; As for example, upon Tewesday 5. of Jā. It is high water at London, Whitby, Harle-poole, and Penmark at a Leavenof the clock in the Forenoone. And note that every 12 hours the Tide alters a little more then a quarter of an houre. As now it is high water at a 11 before noone, then it will be high water againe a little above a quarter of an houre past 11 at night: Note flowes above 4 hours and ebbs 8.

Note that 15 minutes make a quarter, 30 halfe an hour, 45 three quarters, and 60. an houre.

Note also that when the Moone commeth to the South-east or to the South-west, it maketh a full Sea in all those aforesaid places.

The beginning & ending of the Termes, with their Returnes and Essoyne dayes, dayes of exception, Returna brevium, and dayes of appearance, for this yeere, 1647.

Returne Dayes, or Dayes of Essoyne.	Dayes of Exception.	Returna Brevium.	Dayes of Appearance.

A Prognostication for this yeare of our Lord God. 1647.

Being the second after the Bissextile, or Leap-yeare.

Wherein is contained the state of the whole Yeare, the disposition of each Quarter, and the inclination of the Weather for every Quarter of the Moone throughout the whole Yeare.

With a Geographicall Epitome, of the Map of ENGLAND, and WALES, &c.

Also many other things of consequence, both pleasant and profitable.

And at the end of the Book, is the whole *Almanack, contained in the Leafe, for this* Yeare 1647. which being curious, is fit to be placed into a Table-Booke, Booke of Accompt, or other.

By *John White*, Well-willer to the Mathematicks.

LONDON,
Printed for the Company of STATIONERS, 1647.

A briefe Cronology of divers memorable things of note, to this present yeare, 1647.

Since the Creation of the World to this yeare	5596
Since the Flood	3940
Since London was built	2715
Since Yorke was built	2613
Since the 72 Interpreters translated the Bible	1926

Since the birth of the Duke of Yorke	15
Since the birth of the Lady Elizabeth	13
Since the King went last into Scotland	9
Since the Parliament began to sit last at Westminster	7

A breife Declaration of the Disposition of the foure Quarters of the Yeare.

And first of the Spring.

Like to the fragrant *Spring* doth Youth appeare,
Young, fresh, and pleasant; so begins the yeare.

Sol in Aries. Taurus. Gemini.

WHEN the glorious Eye of heaven (the Sun) entreth into the first degree of the first Equinctiall signe of Aries; then beginneth the comfortable, wholsom, and cheerefull Spring; which is this yeare upon Wednesday the tenth of March, and endeth upon Friday the 21. of June, in which space of time he traberseth through these three Vernal Signes, Aries, Taurus, and Gemini.

The naturall condition of this Quarter is to be hot and moyst, partictpating of the Sanguine Complexion, (signifying Youth,) which humour doth chiefly predominat from nine of the clock at night, untill three in the morning. Now are the Dayes and Nights of an equall length throughout all the World; and the Sun by his cheerefull presence comforteth & warmeth the sad Earth, causing Trees and Plants to appeare in their beauty. Of all other Quarters this is the most wholsome and pleasant, being the most convenient time to remove Diseases of a long continuance, & to prevent such as are likely to ensue. Now do the Winds of the Air temple & breed. Weeds on the Earth encrease and Fishes in the waters multiply and leave the deepest of the waters to recreate in shallower places. Moreover Spring increaseth wormes, causing Fruits to be scarce and rot-

taste is requisite for our healths that we minister sod the most part, such things as are of a cold & dry quality, and let your Drinkes be more coole and small then in Winter: And now is the chiefest time (if necessity require) to Bathe, Bleed, Purge, or Sweat.

The usuall Infirmities of this season, are these Measels, Small-pocks, Scabbs, Pushes in the face, Ringsevill, Agues, Feuers, Pestilence, &c.

Of the second part of the Yeare, called Summer.

Like the hot Summer, Man is in his prime,
Stout, bold, and fiery, seeking for to climbe.

Sol in Cancer, Leo, Virgo.

Summer Quarter taketh its beginning upon Friday the eleventh of June, (which is the longest day in the yeare) when the Sun entereth into the first degree of the Northerne Tropique of Cancer, and continueth his passage through these three Solsticial Signes, Cancer, Leo, and Virgo, both end upon Sunday the 9th. of September.

By nature the condition of this Quarter is to be hot and dry, signifying Man-hood, participating of the Choleriek complexion, which humour then especially reigneth in the Clock in the morning, till nine hours more. The Sun being now at the highest, causeth the dayes to be longest, and the Nights to be shortest: It drieth, scorcheth, and burneth; and the Winds calmest: The face of the Earth is now adorned with flowers in their beauty, fruits in their maturity, and inhabited of her three kind Creatures (Man, Beast, and Fowle) for their use and comfort: and the pleasant Trees

Bees gather their Honey for their future subsistance: The Naturall heat is now diverted abroad into the outward parts of the body, and Man cannot now so well digeſt in as in Summer, nor can be digeſt ſuch groſſe and ſtrong Meates as then: now are the ſmalleſt & eaſieſt Dainties moſt fleeting for our health, and little ſhoes of Neats-leſt ſuteth Nature, and keepeth the body in healthfull ſtate: Wine is beſt as the beſt of ſuperfluous for weake ſtomachs: and now are ſuch things as are of a cold and moiſt quality: the Summer over-wet rotteth fruite, and destroyeth Corne.

The infirmities of this Quarter, are Peripneumy, Feavers, Dropſy, paine in the Head and Belly, Jaundice, Purples, &c.

Of the third part of the yeare, called Autumne or Harveſt.

As *Autumne* Fruits are pluckt, and Leaves decay,
So Man declines, there's nothing at a ſtay.

Sol in Libra, Scorpio, Sagitar.

AVtumne, harveſt, or the fall of the Leafe, now diſcloſeth Earth of her former glory, & taketh its beginning on Munday the 22. of September, & endeth the eleventh of December. At the beginning of which Quarter the Sunne is in the ſecond Equinoctiall point, cauſing equall the dayes and nights: & be of an equall length: & continueth the time of the Sunne paſſage through theſe three Autumnall Signes, Libra, Scorpio, and Sagitari.

The Naturall condition of this Quarter is to be cold and dry, retaining in the body a predominancy of Choler, of the Melancholy complexion, whereby humours [illegible]

most predominat from nine of the clock in the morning, till three in the afternoone. Now Grasse is mowed, Corne is reaped, Fruites gathered, and the laborious Husband-man should now receive some profit of his forepassed toyle: (which the Lord of heaven grant for the reliefe and comfort of us all.) Flowers fade, Leaves fall, Floods increase, and all vegetables loose their former strength and vigour, and the most part of sensible Creatures seek them a shelter against the stormy ensuing Winter: Of all the other Quarters of the yeare this is the most unwholsome, breeding diseases of divers kinds in our Bodies; therefore it is expedient to beware of the morning and evening cold, and use such things as are of a hot and moist quality. It is now a fit time (if need require) to purge, Bath, and Bleed: An over-wet Autumne causeth scarcity of fruit, and rotteth Grapes, which maketh unwholsome Wines.

The usuall Sicknesses of this Quarter are many, as sore Eyes, Agues, Melancholy, Falling-sickenesse, Fluxes of Blood, Emrods, Fistulaes, Spleene, the Stone, pains in the Back and Kidnies, &c.

Of the fourth part of the Yeare, Called Winter.

Our *Spring*, our *Summer*, and our *Autumne* past,
Death like to *Winter* commeth at the last.

Sol in Capricorn, Aquarius, Pisces.

The fourth Quarter taketh its beginning upon Saturday the 21. of December; & continueth till the tenth day March the next ensuing yeare 1648. The beginning of this Quarter hath the shortest day and longest night in the yeare, and continueth till the Sun hath made his revolution through these three Signes, Capricorn, Aquarius, and Pisces.

By

By nature this Quarter is cold and moyſt, reſembling old Age, and is of the flegmatick complexion, which humor doth moſt predominate from three of the clock in the after noone, till nine at night. Now doth the Seatoſt Mariners endure many a bitter ſtorme on the raging Ocean; for the Winds are high and ſtrong, and the Ayre is cold, the vigour & ſtrength of all things now waxeth weak and feeble: and the poares of the Earth are now incloſed, and ſhut up by the extreame coldneſſe of the Ayre: Beaſts ſeek for a ſhelter, Fowles flye to the warmeſt Climates, Serpents betake them to their Caves, and the Fiſhes get into the depeſt of the Waters, and all to ſhun the extremity of the cold: for look whatſoeuer the cheerfull Spring and comfortable Summer did produce and nourſh, this Quarter doth deſtroy and banish; Yet the colder and dryer the Winter is, it is the more wholeſome for Man and Beaſt: Yet too much cold deſtroyeth Trees, Plants, and Flowers. A wet and warme Winter is a friend to Husbandry, but no friend to Nature; yet indifferent ſtore of Snow doth ranken the Earth, and preſerveth Corne. For the preſervation of health, it is expedient that we ſhould uſe ſuch Meates as are of a hot and dry quality, expelling the cold and unwholſome ayre with good Fires, warme Bloaths, ſtrong Wines, and comfortable Drinke; and be carefull to keep your Head and Feet from wet and cold: but yet can the ſtomache digeſt more groſſe and ſtrong Meats then in Summer; the reaſon is, that the naturall heat is driven (by the coldneſſe of the Ayre) into the inward parts of the body to help digeſtion, and to comfort the Vitall Spirits.

The Diſeaſes and ſickneſſes of this Quarter, are theſe, Coughes, Rhewmes, Poles, Fevers, Paſſies, Aques, ſore Eyes, Tooth-ach, Cathars, Fluxes, Pleuriſies, Cramps, &c.

The New, Full, and Quarters of the Moone, with the ordinary Judgement of the Weather, for every Quarter of the Moon for this Yeare, 1647.

January.

First Quarter on Munday the 11th. day, neere two of the clock in the morning, Frost.

Full Moone ariseth on Sunday the 17. day, about halfe an houre past 6. of the clock at night, Indifferent.

Last Quarter on Sunday the 24. day, about a quarter of an houre past 11. of the clock at night, Wet.

New Moone on Munday the 25. day, three quarters of an houre past 11. of the clock at night, Windy.

February.

First Quarter on Tuesday the second day, 14. quarters past 11. of the clock, Frost.

Full Moone on Tuesday the 9. day, about 11. of the clock in the morning, very cold.

Last Quarter on Tuesday the 16. day, neere 11. of the clock in the morning, Snow or Haile.

New Moone on Wednesday the 24. day, a houre of the clock neere noone, Wet.

March.

First Quarter on Thursday the 11. day, 14. quarters of an houre past one in the morning, Stormy.

Full Moone on Wednesday the 17. day, neere 12. in the morning, Mean weather.

Last Quarter on Thursday the 25. day, a quarter of an houre past one of the clock in the morning, Faire.

New Moone on Friday the 26. day, about quarter an houre past 12. of the clock in the morning, Faire.

April.

First Quarter on Friday the second day, a quarter of an houre past 12. of the clock in the morning, Faire.

Full Moone on Friday the 9. day, neere 11. of the clock in the morning, Partly faire.

Last

Last Quarter on Friday the xvi. day iii quarters of an houre past viii. of the clock at night: Indifferent.

New Moon on Saterday the xviii. day, xxxv'. of the clock in the evening Faire.

May.

First Quarter on Saterday the first day, at iii. of the clock in the afternoone, Cloudy.

Full Moone on Saterday the viii. day, about a quarter of an houre past iii in the afternoone, Faire.

Last Quarter on Sunday the xvi. day, xxxv'. of the clock in the afternoon Wet.

New Moon on Monday the xviii. day, at iii. of the clock in the morning: Faire.

First Quarter on Monday the xxv. day about a quarter of an houre past viii. of the clock in the evening: Indifferent.

June.

Full Moon on Monday the viii. day, three quarters of an houre past iii. of the clock in the morning: Cloudy.

Last Quarter on Tuesday the xv. day, a quarter of an hour past viii. of the clock in the morning: Faire.

New Moon on Tuesday the xvii. day, halfe an houre past ix. of the clock before noone, Wet.

First Quarter on Wednesday the xxiv. day, a quarter of an houre past viii. of the clock in the morning: Cloudy.

July.

Full Moon on Thursday the vi. day, at vi. of the clock after-noone: Faire.

Last Quarter on Saterday, the xiii. day, a quarter of an houre past ix. of the clock at night: Faire.

New Moon on Wednesday the xvi. day at vii. of the clock in the evening: Indifferent.

Last Quarter on Thursday the xxiii. day, halfe an houre past x. of the clock in the morning, Wet.

August.

First Moon on Saturday the i. day, halfe an houre past iv. of the clock in the morning: gentle blasts.

Last

Last Quarter on Friday the xiii. day, iii. quarters an houre past viii. of the clock in the morning: Faire.

New Moon on Thursday the xix. day, a quarter of an houer past iiii. in the afternoone: Faire.

First Quarter on Thursday, the xxvi day, at x. of the clock at night: Indifferent.

September.

Full Moone on Saterday the iiii. day, halfe an houre past one in the morning, Faire.

Last Quarter on Saterday the xi. day, a quarter of an houre past viii. of the clock in the evening, Wet.

New Moon on Saterday the xviii day, halfe an houre past x. before noone, Windy.

First Quarter on Saturday the xxv. day, halfe an houre past one of the clock after noone, Cold.

October.

Full Moone on Sunday the iii. day, about iii. quarters of an houre past v. of the clok in the evening, Faire.

Last Quarter on Munday the xi day, at viii. of the clock in the morning, Indifferent.

New Moon on Sunday the xxvii. day, halfe an houre past viii. of the clock at night, Wet.

First Quarter on Munday the xxv. day, about iii quarters of an hour past viii of the clock in the morning, Windy.

November.

Full Moon on Tewsday the ii. day, a Quarter of an houre past ix of the clock in the morning, Faire.

Last Quarter on Tewsday the ix. day, at xi. of the clock before noon, Frost.

New Moon on Tewsday the xvi. day, a quarter of an houre past ix of the clock in the morning: Faire.

First Quarter on Tewsday the xxiii. day, at vi. of the clock in the morning, Wet.

December.

Full Moon on Wednesday the first day, about iii quarters of an houre past xi. of the clock at night, Windy.

Last

Last Quarter on Wednesday, the viii. day at viii, of the clock at night, Wet.

New Moon on Wednesday the xv. day, iii. quarters of an hower past mid night: Frost.

First Quarter on Friday the xxiiii. day, halfe an houre past iii of the clock in the morning: Faire.

Full Moon on Friday, the xxx. day, about xi. of the clock before noone, Faire.

Certaine breife Notes concerning the Yeare and parts there of, with other generall Rules.

A Yeare properly is that Revolution and space of time, wherein the Sun passeth through the twelve Signes of the Zodiack.

A Yeare hath in it twelve Moneths of the Sun, thirteene Months of the Moon: Fifty two Weeks, three hundred threescore and five dayes.

It is to be understood when a Yeare hath in it but three hundred threescore and five dayes, it is meant by the common yeare: But the Astronomicall yeere containeth three hundred threescore and five dayes and sixe houres: and when it is Leap-yeere, the yeare is a day longer than the common yeares, which is in February, the Common having but xxviii dayes, the Leape xxix.

A Month of the Moone is the space and length of time which is between the New Moone and her Wane: and the usuall or common Moneth, is a certaine number of dayes, which are xxviii.

A Weeke or Sebennight, is the fourth part of a Moneth

A Day is the seventh part of a Weeke; & there be two sorts of dayes, the one is a day naturall, the other a day artificiall

A day naturall is the space of xxiiii houres, accounting the night withall.

An artificiall day, is that space of time which is between the rising and setting of the Sun.

An houre is the twenty fourth part of a day naturall.

And a minute is an houre divided into threescore parts.

A

A Geographical epitomie of the Map of England and WALES, wherein is shewed how each Shire is bounded and joyned to each other, and what Point of the Compass every County lyeth from the Honorable City of London; (never before published,) The use of which, and the next Table is explained on the backside of the other Leafe.

The Contents, Compasse, Length, and Breadth of England.

Thus much in Miles whole *England* containes ——— 34866
This much in Miles will reach about it round ——— 1890
His length from *Lizard-point* to *Barwick-straits* ——— 334
Twixt Dover, and *Holy-head* the breadth is found ——— 250

An Alphabetical Catalogue of all the Shires, Cities, Market-Towns, Caſtles, Pariſhes, Rivers, and Parks, in every particular Shire in England and Wales; with the diſtance of miles, and points of the compas from London.

First for the Map: The figures in each shire of the map, are to shew you the names of every County: & the Letters in the same are for rules, as I will shew hereunder.

You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the little black speck ● or spot therein signifieth London. Now if you would readily find the name of any Shire therein, & how many myles the middle of the same County (in a streight line) is from London, & what point of the Compasse it lyeth from the said City; resort then to the Table of Shires on the other side, and it will resolve you.

As for example; Barkeshire 11 hath the figure of 1 in the Map, & so it hath likewise in the Table; where is shewn that the middle or heart of that Shire is 40 myles from London in a streight line, & it lyeth full west from the City; and looking forwards towards the right-hand, it sheweth it hath no City, 11 Market-Townes, 2 Castles, 140 Parishes 3 Rivers, & 13 Parkes. Against Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which shire is from London 35 myles, and lyeth North-west and by West from the said City, it hath no City, 11 Market-Townes, no Castle, 185 Parishes, 2 Rivers, and 15 Parkes; and so of the rest.

The use of the Letters in the Map, is this; Scot. signifieth part of Scotland, I part of Ireland, F part of France, M the Ile of Man, W the Ile of Wight, L the Lizard-point, H Holy-head, the * star the Irish Sea, B the British or English Sea, G the German Sea, Ba Barwick, D Dover, N New-Castle, C the points of Compasse, S the Scale of Myles, by which, you may measure the distance of any place; for every black degree is five Myles so is every white.

The 39 shires from Barkshire to Yorkshire are the English shires, & the other 13 from Anglesey to Radnorshire are welsh.

I must confesse it is further in Myles to the middle of each shire, by reason of the crookednes of the Highwayes, hills, and vallies, but what is here set down is meant in a streight line from London, as is said.

Of

Of the ſeverall Invaſions, Incurſions, Poſſeſſions and Conqueſts of England by forraigne Nations.

OF Ilands *England* was the greateſt Ile,
by *Iulius Ceſar* firſt of Romans knowne;
By Frenchmen next it was poſſeſt a while,
by *Claudius Ceſar* they were overthrowne,
To whom, though they allegiance due did yeeld,
Yet ſtill their Lawes and Cuſtomes they retain'd,
Though they by ſtrangers then were foild in Field,
to beare a Strangers yoake yet they diſdain'd.
Amongſt all Iſlands *England* was the firſt,
that entertaind the Goſpell of the Lord,
Till *Dioclefian* for blood did thirſt,
on all that to this Doctrine did accord.
This Land by *French-men* and by *Scots* oppreſt,
the *Saxons* ayded it, and it enjoyd,
Till *Danes* did vanquiſh them, and it poſſeſt,
who by the former People were deſtroyd:
And ever ſince, the Noble *Normans* race
five hundred eighty years have here remaind,
No Forreigne powers their Kingdome could deface,
ſuch ſtout victorious Kings of them have raign'd.
Heaven guide them ſtill to reigne, and ſend us peace,
that long hath flouriſht in a happy ſtate,
Grant love and True Relgion may increaſe:
but we muſt all upon Gods pleaſure waight.

The beginning, continuance, and ending of the Kings Raigne since the Conquest, with the time how long it is since, to this Yeare, 1648.

Being fit for Scriveners, and such as are imployed in Law causes.

Dyed March, 1625. March 27. After which, writing 23 yeares.

The explanation of the former Table.

NOte that every King began his raigne, the same time that the next precedent King ended his.

If you desire to know how long it is since the beginning of the raign of any King, look how long it is since the ending of the precedent King, and there you shall find your request.

As for example: if you would know when King Henry the 8 began his raigne, how long he raigned, & also how long it is since his raigne: find out first his name amongst the names of the Kings, & searching the row towards the right hand, you shall find he began his raign in the yeare 1509. the 22 of April, and under the title of the time that he raigned, is 37 yeares, 10 monethes, & 2 dayes: And looking forward in the same row, where is 1578 yeare April 21 under the title of since his raigne began.

How to judge what Weather will follow, by the rising and setting of the Sunne.

THe Sunne rising bright & cleare, signifieth a pleasant day: If he rise fiery red, it promiseth raine: If in his rising he be thinly ouercast with a cloud, it betokeneth windy weather: If the Sunne ouer the cloudes before him into the aire, it signifieth faire weather: If at his rising there appeare a circle about him, & banished a way equally, it betokeneth faire weather: If the same circle, it signifieth faire weather: If at his setting he be of diuers colours or clouds like waters, it threatneth raine. If at the rising of the Sunne, his beames seeme red, or long, or encompassed with redde cloudes it signifieth great winde: If at his setting there appeare a thick mist, or if it rayneth in the euening, it threatneth very foule weather to follow. Also if the Sunne beames be spotted either green, pale or black, portending to a

cloud it signifieth rain. The Sun setting cleare without any cloud, signifieth a faire night to ensue. If the circle, or circles about the Sunne be cleare, & of no continuance looke for faire weather: If there be many circles, it signifieth windes: the redder they are, the more vehement windes. If the circles are here & there broken, & are thick & black, look for cold wind or raine: or if he sette behind a great black cloud, raine followeth

How Weather is foreknowne by the Moone.

If the Moon in the third day of her change, or three dayes before her full, or in the midst of the quarter, be found of pure light, nothing compassing her, the two hornes direct up, she promiseth faire weather: but bent to red colour, provoketh winds. If the Moon pale, or somewhat black or thicke, threatneth raine. When the Moone is five dayes old, marke the signe of her hornes, if they be blunt, it signifieth rather: if sharp pointed & pearcing upwards, great windes. If in the fourth day after her change, she have a red circle about her, it signifieth windes and raine.

Of the judgement of the Weather by the Starres

If the Starres appeare of much light, and seeme to be of more, signifie any blasting them ordinary, it betokeneth great windes and moysture in that part where they seeme so: and in Winter, great frosts. When divers Starres appeare with long fiery tailes, it threatneth windes, and great drought: the more in number, the greater shall be the effect. Also, when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seeme to shoot in divers places, it signifieth divers windes: If in all places, winds, thunder, lightning, and such tempestuous weather.

Certaine and short Rules, for the comforting of the cheefe officiall Members of the Body of Man.

Things which are good to comfort the Head.

Lignum Aloes, Aloes, Bacorum, Galingale, Musse, Rosemary, Roses, Camomell, Rue, Frankincence, Nutmegs, Nylon, Balme, Myrre, Spike, and Cloues.

Things good for the Eyes.

Fennell, Verven Roses, Cold water, Celendine, Eyebright, Roses, and Agrimony.

Things good for the Stomack.

Nutmegs, Cloues, Diptanum, Cozall, Saffron, Quinces, Mozmiwood, Olibanum, Agrimony, Fennelsey, Mastick, Lignum-Aloes, Sperum, and Coriander prepared

Things good for the Heart.

Saffron, Cloues, Cynamon, Mace, Nutmegs, Marigum, Burrage, Buglosse, Rosemary, Mirabolanes, Pearles, Lignum-Aloes, Cozall, Musse, and Sorrell.

Things good for the Liver.

Liuerwort, great Raisons, Mozmiwood, Agrimony, Saffron, Cloues, Endiue, Violets, Fennell, Plantine, Dragons, Role-water, Lettice, Violets, Sanders.

Thing good for the Lungs.

Liuerwort, Raisons, Agrimony, Dates, Lungwort, Maydenhaire, Elecampane, Pillacks, and Penides.

Things hurtfull for the Body.

Meates hurtfull to the Teeth.

Nuttes, Meates very hot, Marmed drinke, Sweete meates and drinkes, Rashly Roasts, Hard meates, Bitter meates, Musse, much Vomiting, Leeks, Fatte of Fish, Cottages, and Lettuces.

Things hurtfull to the Eyes.

Garlicke, Onions, Radish, Dunderwelle, Leekes, Sweete & thick suttes, Salt meates, Colewoorts, all Pulse, Musk, wine, Mustard, Onions, Fire, and reading prest ly after supper.

Rules

Rules of Menſuration.

An Inch,	Doth containe	3 Barly corns layd end to end.
A Fingers bredth,		4 Barly cornes in thickneſſe.
A Hand bredth,		4 Fingers.
A Foote,		12 Inches.
A Yeard,		3 Feete.
An Ell,		5 Quarters of a yard.
A Span,		3 Hand bredths.
A Foote,		4 Hand bredths.
A Geometricall pace,		5 Feete.
A Fadome,		6 Feete, or 2 Yeards.
10 Fadome,		A Score of 20 yeards.
A Furlong,		125 Paces.
Our Engliſh Furlong,		132 Paces, or 660 Feete.
A Perch or Rod,		5 yeards & a half, or 16 feet & a half
An Acre,		160 Perches, 5280 paces, or 2640 feet.
A Leagne,		1500 Paces.
An Italian or Engliſh myle		8 Furlo. or 1000 pac. or 5000 feet.
A German Myle,		32 Furlongs,
A Score,		20 Yards.
An Hundreth,		600 Feet, after 5 score to the 100.

Of the Weights of ENGLAND.

We uſe commonly two kind of weights, as Troy and Haberdepois: by Troy weight we weigh Wheat, Bread, Gold, Silver, and ſuch like.

24 Graines of Wheat dry	containes	One penny of Troy weight.
20 Pence,		One Ounce.
12 Ounces,		One Pound.

By Haberdepois is weighed all kind of Grocery, Phiſicall Drugs, and groſſe wares, as Pitch, Waxe, Tallow, Flax, Iron, Lead, Copper, Alome, &c. And though this Pound be greater then the Troy, yet are the Ounces leſſer.

20 Graines of Barley dry	containes	One Scruple of Haberdepois
3 Scruples,		One Dramme.
8 Drammes,		One Ounce.
16 Ounces,		One Pound.
100 Pound,		100 Weight.
20 Tunne,		20 Hundreth.

A Table to know how many houres and Minutes the Moone shineth every Night in the Yeare.

The age of the Moone encreasing	The Houres and Minutes that she shineth.		The age of the Moon decreasing.
☽	Houres.	Minutes.	☾
1	0	48	29
2	1	36	28
3	2	24	27
4	3	12	26
5	4	0	25
6	4	48	24
7	5	36	23
8	6	24	22
9	7	12	21
10	8	0	20
11	8	48	19
12	9	36	18
13	10	24	17
14	11	12	16
15	12	0	15

The Moones night shining. The Moone Morning shining.

The use of this Table.

SEek the age of the Moone in the Almanack, then look the same in this Table, which you shall finde either in the Increasing or Decreasing: and then in the middle Columnes you shall without further labour finde the time of her shining.

As for example: Upon the 31. day of January, I would know how many houres and minutes the moone shineth: I finde in the Almanack it is New moone the 25. day: and reckoning from the next day to the 31. I finde there is five dayes old. Then entring this Table, it sheweth she shineth foure houres and 48 minutes: so doth she likewise when she is 24. dayes old, &c.

Of

Of an Eclipse of the Moone this Yeare 1647.

There will happen an Eclipse of the Moone this Yeare vpon Sunday the tenth of January, neare halfe an houer past nine of the Clock at night: And this Eclipse is to be seene that time by vs of Great-Britaine (if Clouds hinder not the same.) But other Nations Eastward will behold it more late at that time.

The reason of the Moones Eclipse, is the interposition of the body of the Earth betwixt the Sun and her (for a white the Moon having no light of her selfe, but what she receiveth from the Sun.

The Explanation of a new and easie Kalender here following, for this present Yeare, 1647.

Note that every Month containeth three Rowes or Columnes, (the Figures for the number of Dayes exrepted) The first Columne toward the left hand containeth the Week Dayes and Sunday Letter: The second, the Signe wherein the Moon is every day. And the third the Changes and Quarters of the Moon. Note that she being thus O figured doth signifie the new Moon; & placed this) way is the first Quarter: This ● the full Moon: And againe this (the last Quarter. Note also that the Figures ove the head of the Moone do signifie the houre of her Change, Full or Quarters, and the Letters above or beneath the time after noone, or after midnight, N standing for After noone till Midnight, and M, for after Midnight till Noone.

As for Example, against the 4. day of January, being Monday, I do find the Moone in Aries, ♈ (which is thus) characters, which is the last Quarter, at two of the clock in the morning. Againe, one the 5. day of February being Tuesday I do find the Moon in Virgo ♍, and is thus ● characters, which is the Full Moon, at 8 of the clock in the morning.

Note also, that at the head of every month is placed the first day new setting of the Sun, for the most of every month: As for Example, for the middle of January, the ☉ Sun riseth at 7 of the clock and 43 minutes, and setteth at 4 & 17 minutes &c.

Note also somewhat (on the backside of the leafe) for every Month, the Feasts both Moveable and Fixt, with the beginning and ending of every Tearme: As Twelfeday is on the 6 of January, Candlemas is on the 2 of April; Whitsunday on the 6 of June: Tearme begins on the 23 of January, and endeth on the 12 of February, &c.

A

briefe and easie Almanack for this Yeere 1647. which being cut out, is fit to be placed into any *Booke of Accompts, Table-booke*, or other, conteyning the whole Kalender, in a short method; By *Iohn White*.
